TRANSFORMER WINDING RESISTANCE METER
TWRM-10A uP

Introduction

Transformer Winding Resistance Meter is designed to measure the winding resistance of transformers, Inductors, generators and motor windings, Tap Changers Bus Bar contacts, Power cables etc.

It is specially designed for Highly Inductive objects like 400KV/220KV.. This is only indigenous TWARM which gives very fast readings for 3Phase Star-Delta any combination Transformers. The built in open circuit Voltage of DC Supply ensures that core of the transformer is saturated for fast measurements to be taken. Care is taken to absorb the Back emf of such transformers. For user safety, Indication for discharges is provided on front panel , if the current through winding under measurement is disturbed/discontinued.

Instrument has built in 10A regulated and highly stable current source with current selection of 10Amp, 5Amp, 1Amp & 0.1Amp, 0.01 Amp

Instrument uses ratio-metric circuit where the resistance of specimen is compared with known internal standard and 4 ½ digit LCD display is provided for resistance and current measurement in μE , mE & E.
